

RITIK SHARMA

Title: Software Engineer
Location: Bangalore, India
Languages: Hindi (native), English (fluent)

Experience Summary

Ritik Sharma is a Full-Stack Developer with experience in building secure and scalable web applications using **Java, Spring Boot, React, and MySQL**. He developed a **Leave Management System**, featuring JWT-based authentication, role-based access control, leave approval workflows, employee management, and leave balance tracking. Ritik specializes in designing RESTful APIs, implementing Spring Security, developing responsive user interfaces with React, and designing maintainable application architectures. He is passionate about building user-centric solutions and continuously enhancing his expertise in modern full-stack development technologies.

KEY SKILLS:

- **Functional: Object-Oriented Programming, Problem Solving.**
- **Technical:**
 - **Languages:** C++, Java, Javascript
 - **Frameworks and Libraries:** Spring Boot, Spring Security, React, Node.js
 - **Databases:** MySQL, MongoDB, Azure SQL Database
 - **Cloud:** AWS
 - **Tools:** Git, Github, Postman, Maven
 - **Testing:** Robot framework (Python)

Experience

MBRDI (Mercedes-Benz Research and Development India) (Shadow Project)

- Participating in training, shadowing, and knowledge transfer activities within the Mercedes-Benz Research and Development India (MBRDI) engagement.
- Gaining hands-on exposure to enterprise software development processes, application workflows, and industry-standard engineering practices.

Projects

01	Type of Industry: Leave Management System Project Description: Built a role-based Leave Management System enabling employees to apply for leave, track leave status, and monitor leave balances, while allowing managers to approve or reject requests through dedicated workflows. Implemented JWT authentication, Spring Security authorization, leave balance management, exception handling, and RESTful APIs using Spring Boot, React, and MySQL to create a secure and scalable enterprise application. Role/Title: Full-Stack Developer(Project) Project Duration: 2 months Responsibilities: Developed a full stack Leave Management System using Spring Boot, React, and MySQL. - Implemented JWT Authentication and Role-Based Access Control (RBAC) using Spring Security. - Built employee and manager workflows for leave application, approval, rejection, and status monitoring. - Followed layered architecture using Controller, Service, Repository, DTO, and Mapper patterns. Operating Systems: Windows Software / Languages: Java, Javascript, SQL, HTML, Vscode Special Tools: Spring Boot, Spring Security, JWT, JPA/Hibernate, MYSQL, React
02	Type of Industry : Attendance Management System (AMS) Project Description: - Developed a dynamic web portal for recording and viewing student attendance Role/Title: Full-Stack Developer (Academic Project) Project Duration: 3 months Responsibilities: I designed a website deploying the frontend and backend as separate services to ensure scalability. I developed a secure user authentication system using JWT and bcrypt hashing for password protection.

- Ensured mobile responsiveness using flexible CSS and React components..

Operating Systems:	Windows
Software / Languages:	JavaScript, Node.js, Express.js, MongoDB
Special Tools:	React, Tailwind CSS, Postman

Training, Certifications & Affiliations

- AWS Cloud Practitioner (CLF-02)

Higher Education

- JECRC University – B.Tech. in Computer Science
- Pilani Public School – Senior Secondary School (Class XII)
